

Adaptive Learning Assistant for Enterprise Training

Project Statement

Build a multi-agent AI assistant that delivers personalized training content, tracks learner progress.

Pre-Requisites

Azure subscription, Azure AI Agent Service, Azure AI Foundry, Azure AI Search, Blob Storage, Microsoft Agent Framework

Requirements

- Create stateful agents that adapt to user learning history
- Use Microsoft Agent Framework to plan personalized learning paths
- Implement RAG to retrieve training materials from Blob/upload manually and Search
- Orchestrate agents via Azure AI Foundry/Copilot Studio for content delivery and feedback

Deliverables

- Public Google drive folder with assistant logic, training content
- PPT with architecture, workflows
- Screenshots of working assistant and alert system
